

Logic Assignment: Go to google.com

Identify the problem:

First, I need to access Google.com, ensuring I am connected to the internet and understand my reason for visiting the site, such as performing a search, gathering information, or completing a specific task.

What do I need to know to answer the question:

- What: What is the objective for visiting Google.com? Is it for searching for something in particular or simply opening the site?
- Where: From which device will I access the site, whether it's a computer, phone, or another device?
- When: Is there a deadline for completing this task, or is it something that can be done at any time?
- How: Which browser (Chrome, Safari, etc.) will I access Google.com?

Identify all the data I need to collect:

- Purpose: I want to determine whether I need to perform a search or if I'm just opening the Google website.
- Device: I will be using my PC, which is connected to the internet.
- Time: Since I have internet access, this can be done immediately.

Organize the data:

- Purpose: I intend to open Google.com to perform a search.
- Device: I will be using my PC's browser, Mozilla Firefox.
- Time: I have access to the internet now and can complete this task any time.

Find and identify the relationship:

- Purpose and device: The reason for going to Google.com will guide what I do next.
Since I plan to search for something, I will access it through a browser.
- Time and access: I can complete the task immediately, using my laptop and internet connection.

To find a solution:

- Open Mozilla Firefox on my PC.
- Enter "google.com" in the address bar and press Enter.
- Once the website opens, I can perform the search or complete the necessary task.

Presentation (tell a story):

I will use my laptop to open Google Chrome and type "google.com" into the address bar. Once the website loads, I can search for what I need or complete any other task. This straightforward method allows for efficient access to the site. I can follow the same steps whenever I need to visit Google.com.
