Assignment #9

***“Feed the Pet”***

1. Identify the problem:

My pet needs to be fed for the evening, but I want to make sure I provide the right type and amount of food at the right time to keep my pet healthy and happy.

2. What do I need to answer the question?

What: What am I feeding my pet? Are there particular feeding needs or food preferences that my pet has?

Where: Where the food is kept, and where my pet normally takes food?

When: At what time is feeding, and how frequently would they be fed daily?

How: How do I get the food ready? Is measuring portions required, or water, or something else?

3. Identify all the data I need collect:

Type of pet: My dog weighs 20 pounds.

Food Type: Kibble dry, especially for small and medium-sized dogs.

Feeding size: 1 cup of kibble

Location: Food is kept in the pantry, and the feeding bowl is kept in the kitchen.

Timing: It is already 6:30 PM, and dinner should be served at 6:45 PM for the evening.

4. Organize the data:

Pet and food details:

It is a 20-pound dog, it takes 1 cup of dry kibble per meal.

Food is stored in the pantry, whereas the bowl is in the kitchen.

Timing: Feed the dog by 6:45 PM.

Prep: In a bowl, using the scoop stored in the pantry, measure 1 cup of kibble.

5. Find and identify the relationship:

The size of my dog and his dietary needs determine the sizes of portioning: 1 cup. It is portioned at a time so that it can keep my dog on schedule, keeping him consistent without overfeeding or underfeeding my dog.

6. To find a Solution:

At 6:40pm, head to the pantry, grab the scoop, and scoop out 1 cup of kibble. Pour the kibble from the bag into the kitchen feeding bowl. Make sure fresh water is available, as my dog always drinks after eating.

7. Presentation- tell a story:

At 6:30 PM, my dog stood near the pantry, where the food was kept, and wagged their tail. As it is important to be on time with their evening feeding, I got up at 6:40 PM and got the scoop from the pantry. Measuring exactly 1 cup of dry kibble, I poured it out into their clean bowl in the kitchen. I checked that their water bowl was full, as after dinner my dog always needs something to drink. At 6:45, my dog was just munching away, his tail wagging with every bite in his mouth. That way, I know they will stay healthy, happy, and fed on time every day.
